

Who lives in the Census Division of Lunenburg?

Ray D. Bollman
December 31, 2021

1. Introduction

a. Definitions

2. Population numbers and trends over time

3. Employment rates: Percent of the population that is employed

4. In which industry sectors are the workers employed?

5. An approximated Gross Domestic Product (GDP) for the Lunenburg Census Division

6. Household income levels

7. Summary of key points

Appendix A: Employment in the Lunenburg CD in 2011 and 2016 for each industry sector and subsector

Introduction

The objective of this report is to provide demographic and economic contextual information for the study by the Rural Futures Research Centre at Dalhousie University regarding the economy, services and amenities in Lunenburg County, Nova Scotia.

Definitions

Data for the Lunenburg County are published by Statistics Canada in their series of data for census divisions where the **Lunenburg Census Division (CD)** includes the census subdivisions of:

- The Municipality of the District of Lunenburg;
- The Town of Bridgewater;
- The Town of Lunenburg;
- The Town of Mahone Bay
- The Municipality of Chester; and
- The Gold River 21 First Nation.

In Nova Scotia, the Halifax Regional Municipality may be classified as a metro CD and all other Nova Scotia CDs would be classified as non-metro CDs.

A census division (CD) is the general term for provincially legislated areas (such as a county, a municipalité régionale de comté or a regional district) or their equivalents. CDs are intermediate geographic areas between the province / territory and the municipality (census subdivision). Data for each CD includes all embedded (incorporated and unincorporated) localities in the CD.

- A **metro CD** has all of its component census subdivisions (CSDs) delineated as part of a Census - Metropolitan Area (CMA) (centre of 100,000 or more).
- A **partially-non-metro CD** has some component CSDs being within a CMA and some CSDs being outside a CMA.
- A **non-metro CD** has all of its components CSDs being outside a CMA.

A **Census Metropolitan Area (CMA)** must have an urban core of at least 50,000 and must have a total population of 100,000 or more after including all neighbouring census subdivisions (CSDs) (i.e., incorporated towns or municipalities) where 50% or more of their employed population commutes to the CMA. More simply, a CMA is an agglomeration of 100,000 or more. In the 2016, there were 4 CMAs in the Atlantic Provinces: Saint John; Moncton; Halifax; and St. John's.

Population numbers and trends over time

In the Atlantic Provinces, the population of non-metro CDs was 1.3 million in 2021 and has been relatively stable over the past decade. Note however that the population of metro and partially-non-metro CDs has been growing over time.

Atlantic Provinces population in non-metro census divisions* was 1.3 million in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by
RayD.Bollman@sasktel.net

When compared to the population trend for non-metro CDs at the Canada level, we see a 7% decline in the Atlantic provinces from 1996 to 2007 and then a relatively flat trajectory since 2007. However, the population of Canada's non-metro CDs is now about 6% above the level in 1996.

Trend in population in non-metro census divisions* (1996 = 100)

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Chart by RayD.Bollman@sasktel.net

Within Nova Scotia, the population in the one metro CD (i.e., the Halifax CD) has grown over time whereas the population of Nova Scotia's non-metro has been declining over much of the period since 1997. Nevertheless, Nova Scotia's non-metro population remains higher than the population of the Halifax CD

Nova Scotia population in non-metro census divisions* was 531 thousand in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

More precisely, the population in Nova Scotia's non-metro census divisions decline continually from 1997 to 2015 but has stabilized at about 530 thousand since then.

Nova Scotia population in non-metro census divisions* was 531 thousand in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

All of the above was to provide context of the trend in population in non-metro CDs in the Atlantic Provinces and in Nova Scotia.

Moving on to the Lunenburg CD. Since 1997, the population of the Lunenburg CD has declined from about 48.5 thousand in the period from 1997 to 2005 and has fluctuated around 47.5 to 48.5 thousand since 2006. However, after declining to 47.5 thousand in 2004 and 2005, the population has increased in each year since 2016

The population in the Lunenburg census division* was 48,300 thousand in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Chart by
RayD.Bollman@sasktel.net

A quick review of the year-to-year percent change in population in the Atlantic Provinces will add to the discussion presented above.

Overall, in the Atlantic Provinces, the population of non-metro CDs has been growing since 2016.

Population in Atlantic Provinces non-metro census divisions* has been growing since 2016

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

Similarly, the population of Nova Scotia's non-metro CDs has been growing since 2016.

Population in Nova Scotia non-metro census divisions* grew in 2019 and 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

This pattern extends to the Lunenburg CD. Population has been growing since 2016.

Population in the Lunenburg Census Division* has been growing since 2016

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

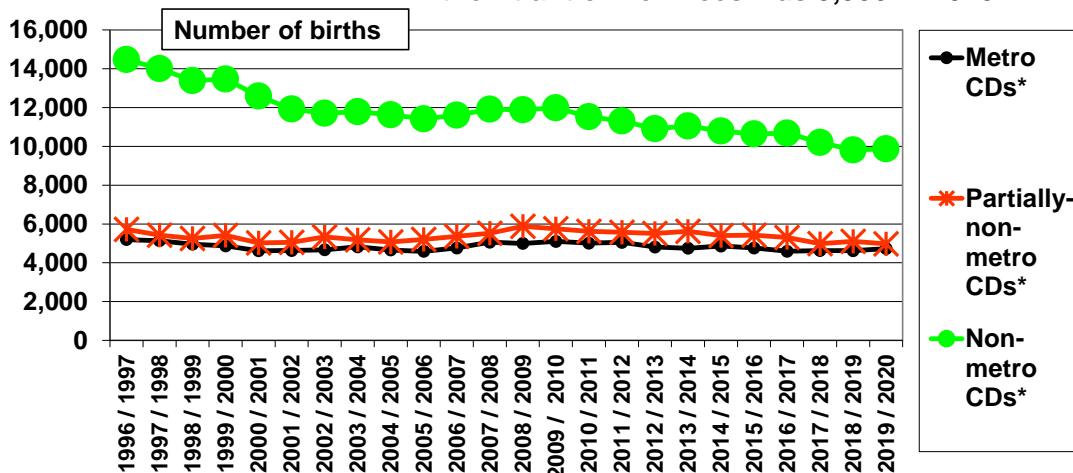

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

The components of population change are natural balance (births minus deaths), net international migration (immigration minus emigration) and net domestic migration (in-migrants from another CD in Canada minus out-migrants to another CD in Canada).

First, we look at births. In non-metro CDs in the Atlantic Provinces, the annual number of births has been (generally) declining since 1997.

The number of births in non-metro census divisions* in the Atlantic Provinces was 9,900 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

Similarly, the number of births has been (generally) declining in the non-metro CDs of Nova Scotia.

The number of births in non-metro census divisions* in Nova Scotia was 4,200 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

However, in the Lunenburg CD, the number of births has varied within the range of 300 to 350 births per year since 2002.

The number of births in Nova Scotia's Lunenburg census divisions was 341 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

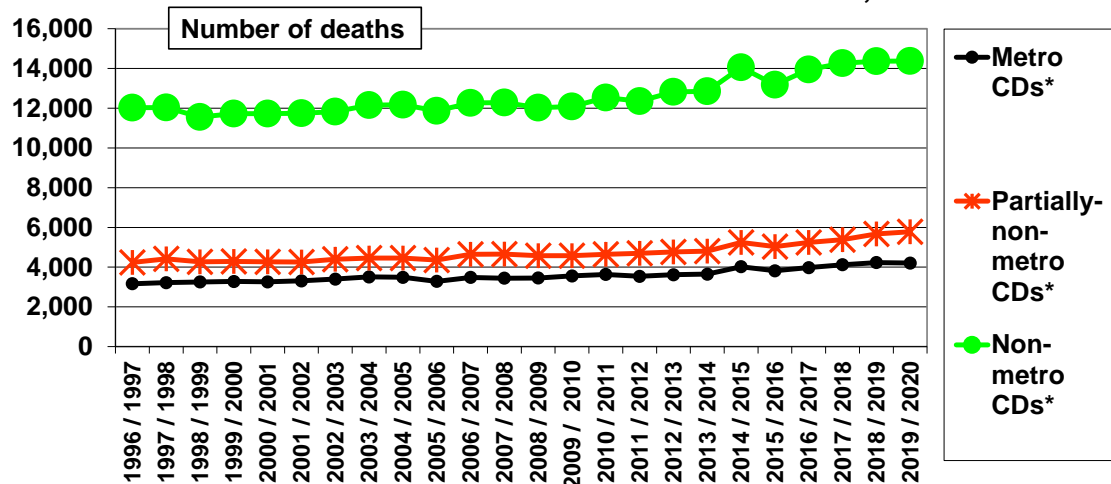

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

The other component of natural balance is the number of deaths. In the Atlantic Provinces, the number of deaths in non-metro CDs has been generally increasing since 1997.

The number of deaths in non-metro census divisions* in the Atlantic Provinces was 14,400 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

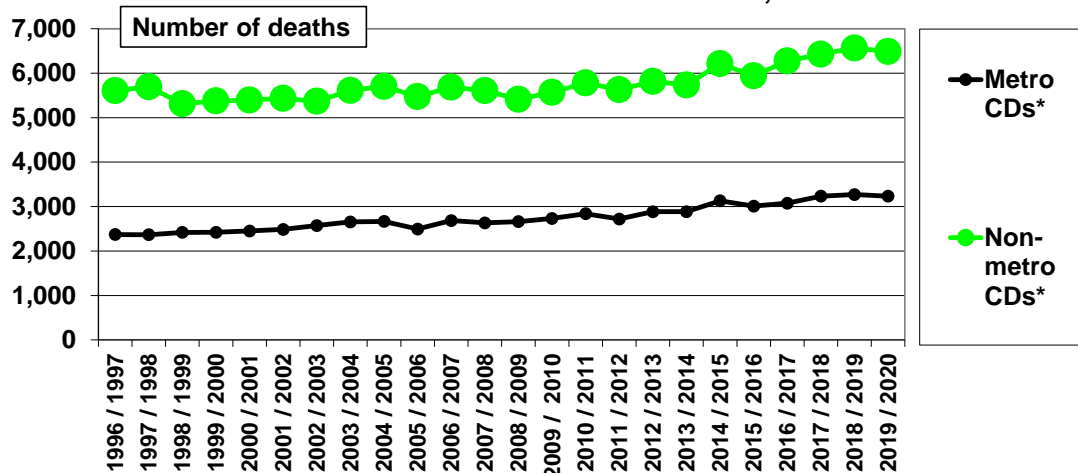

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

Similarly, within the Nova Scotia non-metro CDs, the number of deaths has been (generally) increasing since 1997.

The number of deaths in non-metro census divisions* in Nova Scotia was 6,500 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

Within the Lunenburg CD, the number of deaths was over 600 in 2019 and 2020.

The number of deaths in Nova Scotia's Lunenburg census division was 615 in 2020

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

As noted, the natural balance in population change is the number of births minus the number of deaths. Within Atlantic Canada's non-metro CDs, the natural balance has been negative since 2003.

In Atlantic Canada non-metro census divisions, deaths became greater than births in 2003

Source: Statistics Canada. **Annual Demographic Statistics**. Table 17-10-0140-01

Chart by RayD.Bollman@sasktel.net

In Nova Scotia's non-metro CDs, natural balance has been negative since 2001.

**In Nova Scotia's non-metro census divisions,
deaths became greater than births in 2001**

Source: Statistics Canada. Annual Demographic Statistics. Table 17-10-0140-01

Chart by RayD.Bollman@sasktel.net

Natural balance in the Lunenburg CD has been negative throughout the 1997 to 2020 period. In 2020, natural balance lowered the population of the Lunenburg CD by -0.57%.

**In Nova Scotia's Lunenburg Census Division, natural balance
(births minus deaths) contributed -0.57% to population change in 2020**

Source: Statistics Canada. Annual Demographic Statistics. Table 17-10-0140-01

Chart by RayD.Bollman@sasktel.net

In terms of the contribution of domestic migration to population change, across all non-metro CDs in Atlantic Canada, there has been negative domestic migration (i.e., more out-migrants to other CDs in Canada compared to in-migrants from other CDs in Canada) throughout the period from 1997 to 2020. In recent years, this net-migration has become small, with a -0.02% impact on population change in 2020.

In 2020, net internal migration contributed -0.02% to population change in Atlantic Canada's non-metro census divisions*

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

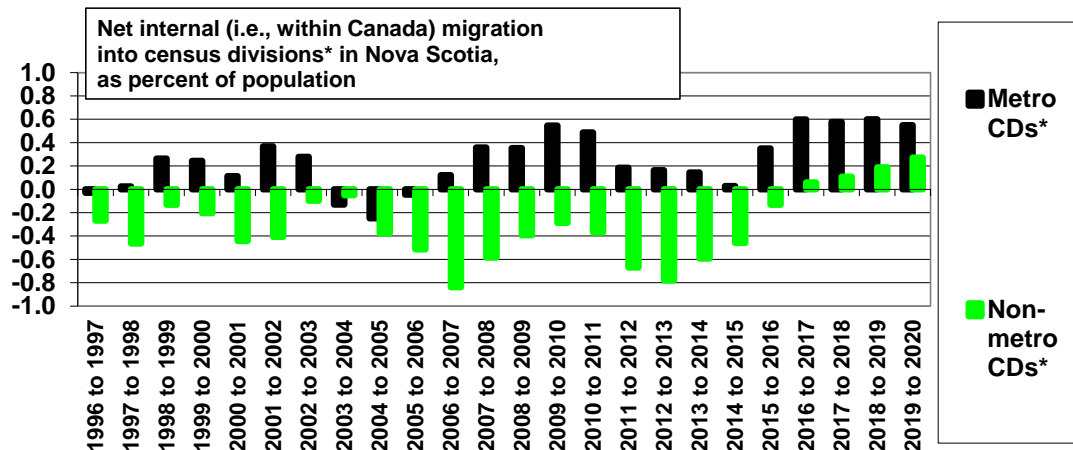

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by
RayD.Bollman@sasktel.net

Within Nova Scotia's non-metro CDs, net migration with other CDs in Canada was negative up to 2016 but, starting in 2017, net migration with other CDs in Canada has been a small positive component of overall population change -- contributing +0.27% in 2020.

In 2020, net internal migration contributed 0.27% to population change in Nova Scotia's non-metro census divisions*

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

Within the Lunenburg CD, net migration with other CDs in Canada made a positive contribution to population change from 1997 to 2005 and again from 2015 to 2020. Net domestic migration contributed 0.76% to population change in 2020.

In 2020, net internal migration contributed 0.76% to population change in Nova Scotia's Lunenburg census division*

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by RayD.Bollman@sasktel.net

The other component of population change is net international migration (immigration minus emigration). Here, we show the data on immigrant arrivals.

Within the non-metro CDs of Atlantic Canada, immigrant arrivals contributed about 0.2% to 0.3% to population change from 2008 to 2015 but the contribution has been marginally higher (0.4%) in the years from 2016 to 2020.

**In Atlantic Canada's non-metro census divisions*
immigrant arrivals were 0.4% of the total population in 2020**

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by
RayD.Bollman@sasktel.net

Within Nova Scotia's non-metro CDs, the contribution of immigrant arrivals to population change has been about 0.2% in each year since 2016.

**In Nova Scotia's non-metro census divisions*
immigrant arrivals were 0.2% of the total population in 2020**

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

The 2016 delineation of CSDs to CMAs was used in the classification of all CDs over the period of 1996 to date.

Source: Statistics Canada. **Annual Demographic Statistics**. Tables 17-10-0139-01 and 17-10-0140-01.

Chart by
RayD.Bollman@sasktel.net

Similarly, within Nova Scotia's Lunenburg CD, immigrant arrivals have contributed about 0.2% to population change in each year since 2016.

**In Nova Scotia's Lunenburg census divisions*
immigrant arrivals were 0.2% of the total population in 2020**

*CDs (census divisions) (counties in some provinces) are comprised of census subdivisions (CSDs). CSDs are incorporated towns / municipalities). Some CSDs are part of a Census Metropolitan Area (CMA). A CMA has an urban core of 50+K and a total population of 100+K and includes neighbouring CSDs where 50+% of the employed residents commute to the CMA.

A **Metro CD** has all their component CSDs classified as part of a CMA.

A **Partially-non-metro CD** contains some CSDs classified as part of a CMA and some CSDs classified as being outside a CMA.

A **Non-metro CD** has all their component CSDs classified as being outside a CMA.

Employment: Introduction

Our focus is on the residents of the Lunenburg Census Division (CD). Thus, we show the employment data for individuals residing in the Lunenburg CD.

Data from the 2016 Census of Population (Table 98-400-X2016391) indicate that in 2016:

- 1,530 Lunenburg CD residents were commuting to the Halifax CD for employment; and
- 415 Lunenburg CD residents were commuting to the Queens CD for employment.

The data also show the extent of commuting into the Lunenburg CD:

- 600 residents of the Queens CD were commuting to the Lunenburg CD for employment; and
- 515 residents of the Halifax CD were commuting to the Lunenburg CD for employment.

To repeat, we are simply documenting the employment patterns of residents of the Lunenburg CD, regardless of their place of work. A profile of all individuals reporting the Lunenburg CD as their place of work is shown in Statistics Canada Table 98-400-X2016321.

Data on employment for census divisions is published only every five years – based on the Census of Population.

Statistics Canada's monthly Labour Force Survey published employment data for "Economic Regions" in Statistics Canada Tables 14-10-0386-01, 14-10-0387-01, 14-10-0388-01, 14-10-0388-01, 14-10-0392-01 and 14-10-0393. Nova Scotia's "Southern Economic Region" comprises the CDs of Shelburne, Yarmouth, Digby, Queens and Lunenburg.

Census data on the number employed refers to the number employed in the week before Census Day – May 10, 2016. Importantly, data on the type of job held (i.e., which industry sector and which occupation) by individuals includes those working in the week before Census Day plus, if not working at that time, respondents were requested to report the type of job held for the longest duration from January 1, 2015 to Census Day.

Employment rates: Percent of the population that is employed

The employment rate is the number of individuals employed as a percent of the total population in each given age group.

In the Lunenburg CD, among all individuals 15 years of age and over, the employment rate has varied between 50% and 53% in the three census periods of 2006, 2011 and 2016.

The age group with the highest employment rate was among individuals the core-age workforce 25 to 54 years of age. Notably, the highest employment rates were for those 30 to 34 years of age in 2011 at 86% for males and 84% for females.

The employment rate is somewhat lower for females in each age group.

Source: Statistics Canada. Census of Population, 2006, Tables xx and 97-559-XCB2006017; Census of Population, 2011, Table 98-311-XCB2011006, National Household Survey, 2011; and Census of Population, 2016 (Tables 98-400-X2016 & xxx)

The employment rate for the core-age workforce (25 to 54 years of age) in the Lunenburg CD is equivalent to the rate for Nova Scotia as a whole. The Halifax CD ranks highest and the Victoria CD ranks lowest.

Ranking of Nova Scotia census divisions by employment rate for the core-age workforce (25 to 54 years of age), May 2016

Source: Statistics Canada, 2016 Census of Population, Table 98-400-2016283.

Chart by RayD.Bollman@sasktel.net

Within the Lunenburg CD, the employment rate for the core-age workforce is essentially the same for each census subdivision, except for the employment rate in the Gold River 21 First Nation.

Ranking of census subdivisions in the Lunenburg Census Division by employment rate for the core-age workforce (25 to 54 years of age), May 2016

In which industry sectors are the workers employed?

As noted above, these data apply to the job held in the week before the May 10, 2016 Census Day plus for those not working at that time, the data are for the job of longest duration during the period from January 1, 2015 to Census Day.

To show in which sector workers in the Lunenburg CD are more likely to be employed, we show a location quotient (LQ) which is the share of Lunenburg CD employment in a given sector divided by the share for Nova Scotia as a whole. For example, 5.5% of Lunenburg CD workers are employed in agriculture, forestry and fishing, which when compared to the 3.8% for Nova Scotia as a whole, we see that Lunenburg CD workers are 1.4 times more likely (i.e., 5.5 divided by 3.8) to be employed in this sector.

Compared to Nova Scotia as a whole, workers in the Lunenburg CD are more likely to be employed in the following sectors:

- LQ = 1.4 for agriculture, forestry and fishing;
 - LQ = 1.3 for farming;
 - LQ = 2.9 for forestry and logging;
 - LQ = 1.4 for fishing;
- LQ = 2.0 for manufacturing;
 - LQ = 1.6 for food processing;
 - LQ = 3.0 for wood manufacturing;
 - LQ = 4.8 for plastics and rubber products manufacturing;
 - LQ = 2.8 for machinery manufacturing;
 - LQ = 2.5 for transportation equipment manufacturing;
 - LQ = 2.9 for furniture and related product manufacturing;
- Within retail trade;
 - LQ = 1.3 for motor vehicle and parts dealers
 - LQ = 1.1 for building material and garden equipment and supplies dealers
 - LQ = 1.3 for gasoline stations
- Within information and cultural industries;
 - LQ = 1.4 for publishing industries
 - LQ = 1.4 for motion picture and sound recording industries
- Within the health care sector;
 - LQ = 1.2 for nursing and residential care facilities.
- Within the arts, entertainment and recreation sector;
 - LQ = 1.6 for heritage institutions;
- Within the sector of “other” services (personal services, repair services, etc.);
 - LQ = 1.3 for repair and maintenance services; and
 - LQ = 1.4 for personal and laundry services.

The purpose for this list of sectors with an LQ greater than 1 is to highlight sectors where employment is relatively higher which is an indicator of the relative strength of this sector in the Lunenburg CD. Residents may wish to focus local economic development efforts on the relative strengths provide by each of these sectors. (Sectors with only a few employees are not shown in the list above but can be seen in the table below.)

Data for a more detailed set of sectors is shown in Appendix A.

1. NAICS is the North American Industry Classification System. See Statistics Canada. (2017) **North American Industry Classification System: 2017** (Ottawa: Statistics Canada, Catalogue no. 12-501) (<http://www5.statcan.gc.ca/olc-ocl/olc.action?objId=12-501-X&objType=2&lang=en&limit=0>).

2. A location quotient indicates the relative intensity of employment in a sector in the Lunenburg Census Division compared to Nova Scotia as a whole. It is calculated as the ratio of the share (or percent) of employment in a sector in the Lunenburg Census Division divided by the share of employment in this sector for Nova Scotia as a whole.

Source: Statistics Canada, 2016 Census of Population, Table 98-400-X2016292.

An approximated Gross Domestic Product (GDP) for the Lunenburg Census Division

Gross Domestic Product (GDP) is the value of economic production. More specifically, it is the value-added to intermediate inputs by labour and capital. In the case of farm, intermediate inputs would include seed and fertilizer and then capital (such as machinery and buildings) and labour are used in the production process. Thus, GDP is the return to labour and capital.

Statistics Canada publishes the GDP for each sector for each province. If one is comfortable with a (somewhat heroic) assumption that the labour productivity (i.e., GDP per worker) within each sector is the same in the Lunenburg CD as it is for the province as a whole, one can generate an approximated GDP by multiplying the provincial GDP per worker times the number of workers in each industry sector in the Lunenburg CD. (This assumption is the equivalent of assuming that the capital/labour ratio for each sector is the same in the Lunenburg CD as it is for the province as a whole.)

This calculation generates an approximated value of GDP for the Lunenburg CD between \$1.7 and \$1.8 billion in 2016. (The former number is the sum across the sectors and the latter number simply uses the provincial average across all sectors of the GDP per worker which is multiplied by all workers in the Lunenburg CD.)

Household income levels

How does the story of employment play out in terms of household income? The median household income in 2015 for the Lunenburg CD ranked 10th among the 18 CDs in Nova Scotia.

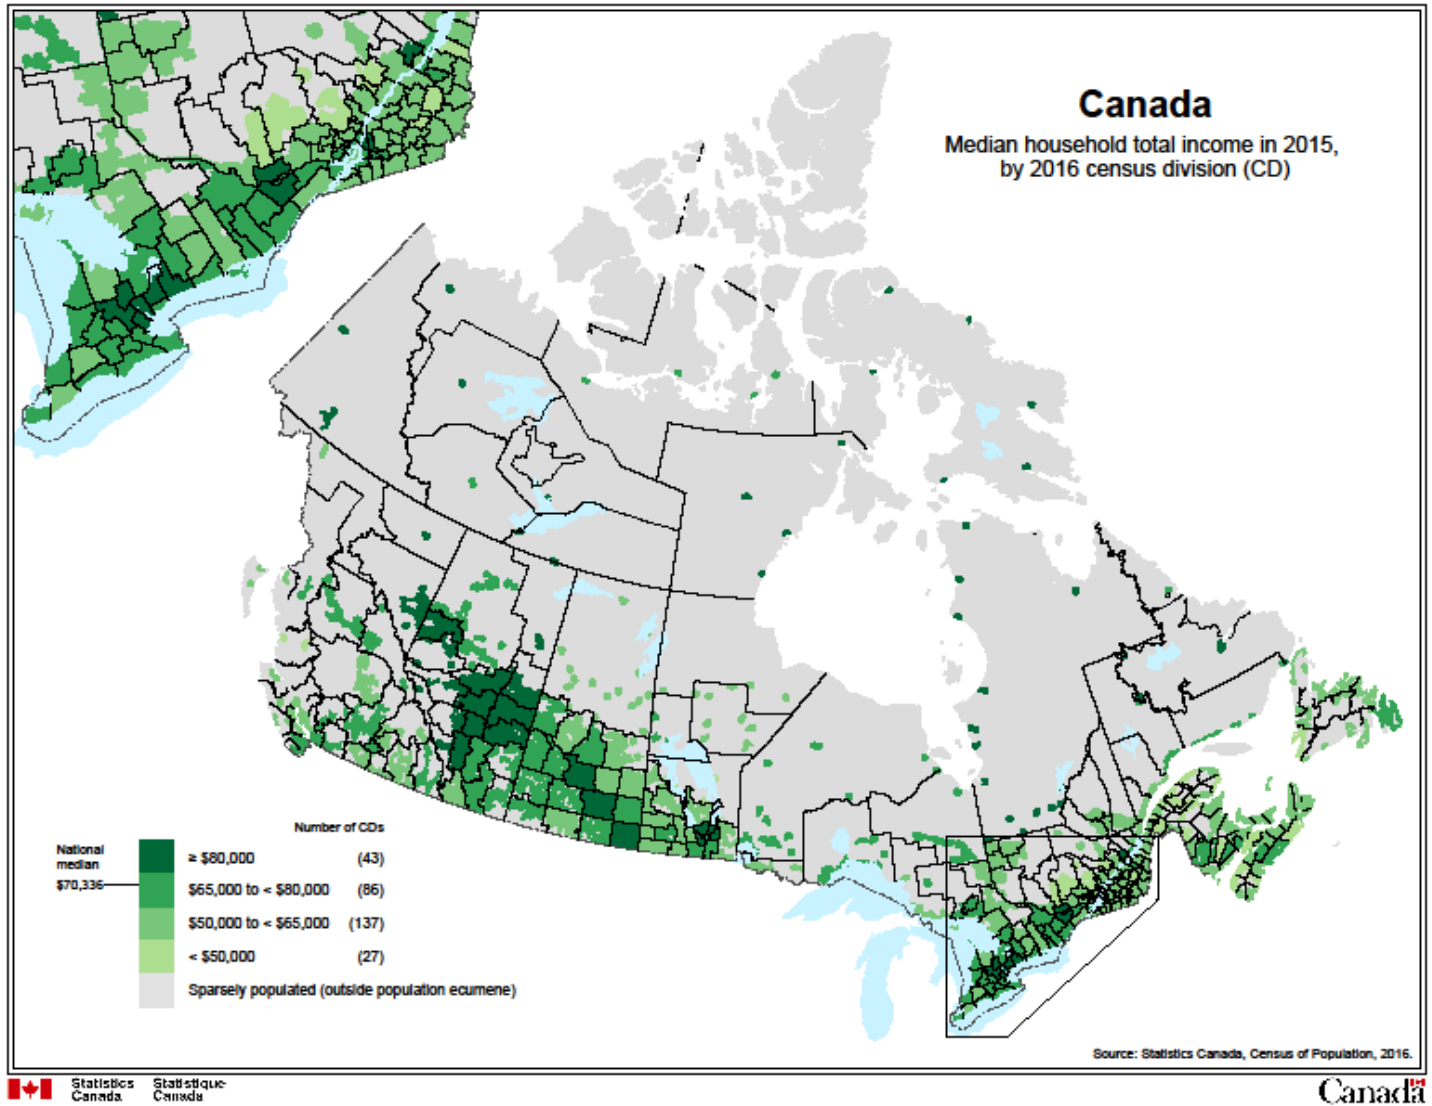

**Ranking of Nova Scotia census divisions
by median total income of households, 2015**

Source: Nova Scotia (2017). Median Total Income of Households in 2015 (2016 Census of Population)
(https://www.novascotia.ca/finance/statistics/archive_news.asp?id=13155).

Chart by
RayD.Bollman@sasktel.net

A glance at the pattern of median household incomes across Canada shows a lighter green pattern (i.e., a pattern of lower household incomes) across the CDs in Atlantic Canada, compared to income levels associated metro centres such as Ottawa-Gatineau and the corridor from Toronto to Kitchener-Waterloo-Cambridge in Ontario and the Edmonton area of Alberta.

Summary of key points

The population of non-metro CDs was continuously declining from 1997 to 2007 across the Atlantic Provinces and from 1997 to 2015 in Nova Scotia. The population of the Lunenburg CD had a varying trajectory with a smaller overall decline from 1997 to 2015, compared to the pattern for all non-metro CDs in Nova Scotia.

Since 2016, the population of non-metro CDs has been growing across Atlantic Canada and across Nova Scotia. The rate of growth in the Lunenburg CD has been somewhat greater than for non-metro CDs in Nova Scotia as a whole.

Non-metro CDs have been experiencing a negative natural balance (i.e., births minus deaths is negative) since the beginning of the 2000s – and continuously since 1997 in the Lunenburg CD. A negative natural balance means that localities who want to grow their population must attract in-migrants from elsewhere in Canada or attract immigrants from other countries.

More people were moving out of non-metro CDs than were moving into non-metro CDs in Atlantic Canada throughout the 1997 to 2000 period – and up to 2016 for non-metro CDs in Nova Scotia. Thus, only in recent years has there been more migrants into Nova Scotia's non-metro CDs, compared to migrants out of non-metro CDs.

Similarly, the Lunenburg CD has experienced more in-migrants than out-migrants since 2015. However, in the earlier period from 1997 to 2005, the Lunenburg CD was also attracting more in-migrants from other CDs in Canada, compared to the number of out-migrants.

Over time, non-metro CDs have always attracted a few (but only a very few) immigrants. The rate of immigrant arrivals has been marginally higher since 2016.

The employment rate (i.e., the percent of the population that is employed) within the Lunenburg CD looks quite similar in each of the census years of 2006, 2011 and 2016. The highest employment rates were in the core-age workforce (25 to 54 years of age). In each group, females were (slightly) less likely to be employed. The employment rate for the core-age workforce in the Lunenburg CD ranked 4th among the 18 CDs in Nova Scotia.

Employment in the Lunenburg CD is relatively more intensive in some key sectors, compared to the pattern of employment across Nova Scotia as a whole. Some examples are:

- 4.8 times more intensive in rubber manufacturing;
- 3.0 times more intensive in wood manufacturing; and
- 2.5 to 2.9 times more intensive in forestry and logging and in the manufacturing of machinery, transportation equipment and furniture.

An approximation of the GDP generated by the Lunenburg CD (based on an admittedly heroic assumption) indicates a GDP of \$1.7 or \$1.8 billion in 2016.

In terms of income levels, the median total income of households in the Lunenburg CD ranked 10th among the 18 CDs in Nova Scotia.
